PTD's QUADRENNIAL FEATURE ARTICLE INDEX

Where to find and how to obtain major articles appearing in Power Transmission Design from 1985 through 1988.

Whether you are searching for information on a particular topic or trying to find a specific article, PTD's quadrennial index will help you identify any feature article published in PTD during the past four years.

Photocopies of individual articles are available at $2.00 each. A limited number of magazines are available at $4.00 each. Both prices include shipping and handling costs. Quantity discounts are available on reprint orders and will be quoted on an individual basis. Orders totaling less than $50.00 must be accompanied by a check made payable to POWER TRANSMISSION DESIGN. Microfilm copies are available in many libraries. Also, individual articles and complete issues are available in photocopy and microfilm form from University Microfilms International, 300 N. Zeeb Road, Ann Arbor, Mich. 48106, phone: (313)761-4700 ext. 222.

Feature article title	Mon	Yr	Page
ADJUSTABLE SPEED DRIVES			
Electrical adjustable-speed drives — Common Q's and A's	Jan	85	23
Digital control improves servo setup & performance	Mar	85	27
Hydrostatic drives improve quality and productivity	Apr	85	29
Electrical adjustable-speed drives: Q's and A's	Jun	85	63
Make your adjustable speed drive smarter	Aug	85	55
Adjustable speed drives — 1986 Handbook	Dec	85	A77
Smart drives power large conveyors	Feb	86	17
Adjustable-speed drives: an overview	Mar	86	A3
AC equals DC	Mar	86	A15
Diagnostics increase drive uptime	Mar	86	A19
Increasing drive uptime	May	86	81
V-belts for adjustable-speed drives	May	86	91
New AF drive powers single-phase motors	Aug	86	31
Mechanical drive withstands harsh environments	Sep	86	42
Computers talk to standard ac drives	Sep	86	45

Feature article title	Mon	Yr	Page
ADJUSTABLE SPEED DRIVES cont.			
Adjustable-speed drives — 1987 Handbook	Dec	86	A59
Selecting a soft-start system	Mar	87	83
Clever control of A.S. drive ups foundry production	Mar	87	97
Hydrostatic drive withstands harsh environment	Mar	87	98
Modular motor line announced	Apr	87	35
Electric AS drive arrives	Apr	87	42
AF drive developed	Apr	87	46
Recent adjustable-speed drive developments	Apr	87	52
New BLDC for general applications	May	87	33
Inverter power factor and noise	May	87	45
Matching ac motors to adjustable-speed drives	Jul	87	25
Why servo drives?	Jul	87	33
Hydrostatic drive Qs & As	Sep	87	25
Servo system designed for direct drive	Nov	87	18
Hydrostatic drives Qs & As Part II	Nov	87	43
Adjustable-speed drives—1988 Handbook	Dec	87	A71
Tips help increase ac drive up time	Jan	88	21

Feature article title	Mon	Yr	Page

ADJUSTABLE SPEED DRIVES cont.

Inverter troubleshooting tips	Mar	88	49
Taking the mystery out of winder controls	Apr	88	27
A. S. drives powering pumps save money	Apr	88	39
Power rate simplifies drive selection	Jun	88	21
Controlling precision winders with clutches and brakes	Oct	88	25
Adjustable-speed drives—1989 Handbook	Dec	88	A65

BEARINGS

Computers optimize bearing design	Apr	85	15
Torque measurements pinpoint cause of failure	May	85	21
Temperature monitor improves bearing PM	May	85	25
Bearings — The friction fighters	Jul	85	B7
Bearing lubrication questions & answers	Jul	85	B17
Triple lip-seal bearings improve	Jul	85	B27
Bearing manufacturers index	Jul	85	B29
Associations of the bearing industry	Jul	85	B36
Make vibration analysis your crystal ball	Sep	85	24
Magnetic bearings attract attention	Oct	85	21
One bearing does two jobs	Oct	85	79
Turning the table on geared bearings	Nov	85	27
Bearings — 1986 Handbook	Dec	85	A155
Why bearing alloy-steels fail	Mar	86	23
Bearing industry: the good news	Jun	86	33
Air bearings fly high	Jun	86	39
New bearing steel beats speed and heat	Jun	86	43
Bearing design with polymides	Jun	86	51
Taking the pressure out of sleeve bearing design	Sep	86	27
Designing and specifying linear-bearing systems	Nov	86	33
Bearings — 1987 Handbook	Dec	86	A103
Sleeve bearings stand the heat	Mar	87	94
Ceramic bearings roll beyond convention	May	87	19
Support for the bearing industry	Jul	87	B7
Bearing lubrication: The vital signs	Jul	87	B31
Mounted bearings: Qs and As	Jul	87	B37
Getting your bearings on vibration	Oct	87	19
Bearings — 1988 Handbook	Dec	87	A121
Refrigerator puts bearing lockup on ice	Feb	88	87
Understanding rolling-element bearing quality	Jun	88	43
Import quotas: help for U.S. bearings?	Jun	88	67
Advances in tapered roller bearing design	Jun	88	71
Stay low: winning tactics for recirculating linear bearings	Jun	88	77
Drive performance: best supporting role bearings	Jul	88	33
No friction-electromagnetic bearings	Jul	88	34
Why some replacement bearings get hot	Sep	88	49
Selecting your bering retainer system	Oct	88	47
Why rod-end bearings?	Nov	88	15
Bearings—1989 Handbook	Dec	88	A109

BELT AND CHAIN DRIVES

FHP belt performance jumps into the 80s	Feb	85	27
Optimizing belt-drive efficiency	Apr	85	19
Lining up savings with today's V-belts	Aug	85	33
Reducing unscheduled chain drive downtime	Aug	85	61
Belt and chain drives — 1986 Handbook	Dec	85	A195
V-belts for adjustable-speed drives	May	86	91
Belt and chain drives: an overview	Jul	86	BC5

Feature article title	Mon	Yr	Page

BELT AND CHAIN DRIVES cont.

Automatic tensioners take up slack	Jul	86	BC13
Getting the most from silent chain	Jul	86	BC21
V-ribbed belt improves compressor operation	Jul	86	BC29
Belt and chain drives — 1987 Handbook	Dec	86	A161
New belt materials perform	Apr	87	36
Raw-edge V-belt facts	Apr	87	43
CVTs to benefit industry	Apr	87	49
Miniature belt commentary	Apr	87	51
Recent belt and chain developments	Apr	87	52
Controlling polygonal speed variation	Apr	87	63
Applying tensioners effectively	Aug	87	17
Software speeds belt & chain drive selection	Nov	87	33
Belt and chain drives — 1988 Handbook	Dec	87	A159
When to select and how to apply metal belts	Feb	88	59
Keeping synchronous belt drives in line	Apr	88	43
Big chain raises unusual questions	Jun	88	25
Sealed chain lasts longer in abrasive environment	Jun	88	97
Plastic drive tape provides flexible option	Jul	88	49
Belt and chain drives—1989 Handbook	Dec	88	A147

CLUTCHES AND BRAKES

Non-asbestos linings last longer	Jan	85	14
Clutch + coupling = clutch-coupling	Feb	85	15
Torque limiters come through in a clutch	Jun	85	59
Unraveling web tension control	Nov	85	35
Clutches and brakes — 1986 Handbook	Dec	85	A235
Choosing controls for electrical clutches & brakes	Feb	86	23
Clutches and brakes: an overview	May	86	CB3
Applying pneumatic clutches & brakes: common Q's & A's	May	86	CB11
Single-revolution clutches	May	86	CB17
Life saving capsule	May	86	CB25
Indicating brake disc wear electrically	May	86	CB31
Vacuum actuated clutch-brakes	Jul	86	75
Clutches and brakes — 1987 Handbook	Dec	86	A199
New clutch & brake line	Feb	87	19
New backstop clutch line	Feb	87	19
New fluids for clutches and brakes	Feb	87	19
Recent clutch & brake developments	Feb	87	25
Magnetic-particle clutches and brakes	Jul	87	29
Clutch-brake eliminates overlap	Nov	87	26
Clutches and brakes — 1988 Handbook	Dec	87	A193
Selecting clutches and brakes for special applications	Feb	88	CB5
Working with hydraulic fail-safe brakes	Feb	88	CB9
Doing more with wrapped-spring clutches	Feb	88	CB13
The automated factory pushes clutch and brake enhancements	Apr	88	71
Clutch and brake technology update	Jul	88	30
Controlling precision winders with clutches and brakes	Oct	88	25
Clutches and brakes—1989 Handbook	Dec	88	A176

CONTROLS AND SENSORS

Computers optimize bearing design	Apr	85	15
PT computer software	Apr	85	36
Controls and sensors take charge	Oct	85	C11
The ins and outs of programmable controllers	Oct	85	C15
NEMA and IEC standards	Oct	85	C19
Making sense out of sensor selection	Oct	85	C27

Feature article title	Mon Yr	Page

CONTROLS AND SENSORS cont.

Controls and sensors — 1986 Handbook	Dec	85	A271
Choosing controls for electrical clutches and brakes	Feb	86	23
Applying photoelectric scanners: common Q's and A's	Mar	86	17
Handling fragile parts faster: one step at a time	Apr	86	35
Electro-hydraulic servosystems	Apr	86	59
A sensor with a brain	Jun	86	21
Control and sensor update	Aug	86	37
Programmable motion controllers	Aug	86	45
Intelligent I/O improves system diagnostics	Aug	86	57
New sensors detect, measure without contact	Aug	86	65
Computer program speeds spur-gear design	Sep	86	35
Computers talk to standard ac drives	Sep	86	45
Controls and Sensors: 1987 Handbook	Dec	86	A233
Telecommunications technology comes to the factory floor	Apr	87	17
Calculating simultaneous equations on a home computer	Apr	87	23
Mapping factory automation progress	Sep	87	C3
Effectively interfacing sensors	Sep	87	C11
Torque transducers improve quality and process control	Sep	87	C17
Windings give rotor position feedback in new BLDC motors	Nov	87	15
New stepper system simplifies programming	Nov	87	18
Board-level indexers for PCs	Nov	87	20
Intrinsically safe photoelectrics	Nov	87	21
Proximity sensors offer precision accuracy	Nov	87	20
Three new motion control cards	Nov	87	22
Manual-programmable motion controllers	Nov	87	22
Controls and sensors — 1988 Handbook	Dec	87	A245
When to apply resolvers to motion control	Apr	88	67
Programmable controls and personal computers	Jun	88	29
Advances in electrical components and circuits astonish the imagination	Jul	88	27
Falling microprocessor prices enable users to pick up a spare	Jul	88	29
MAP passes many milestones, ready for use	Sep	88	17
AI sense and sensor ability	Sep	88	23
PLC programming languages	Sep	88	25
Proximity sensors speed production, increase uptime	Sep	88	33
Computers give motion new control	Nov	88	35
Computers predict failures	Nov	88	39
Controls and sensors—1989 Handbook	Dec	88	A237

COUPLINGS AND U-JOINTS

Clutch + coupling = clutch-coupling	Feb	85	15
Solving U-joint vibration problems	Jul	85	85
Marine coupling waters down mining expense	Sep	85	39
Flexible shaft improves fluid level gage	Sep	85	43
Couplings and U-joints—1986 Handbook	Dec	85	A301
U-joints improve manufacturing flexibility	Jan	86	97
Couplings and U-joints: an overview	Sep	86	CU5
Flexible coupling lubrication improvements	Sep	86	CU15
U-joints solve tough application problems	Sep	86	CU23
Continuous oil lubrication comes to spindle couplings	Sep	86	CU27
Flexible couplings increase product value	Sep	86	CU30
Couplings and U-joints — 1987 Handbook	Dec	86	A257
Coupling provides sweet protection	Mar	87	104
Non-lubricated couplings improve performance, reduce maintenance	Jul	87	39
Noncompromising torque limiter offers greater protection	Oct	87	33
Universal-joint gear couplings?	Oct	87	40
Couplings and U-joints — 1988 Handbook	Dec	87	A265
Putting the damper on torsional vibration	May	88	41
Don't overlook U-joints for high-speed drives	Jul	88	43
The rigid coupling refresher	Oct	88	51
Couplings and U-joints—1989 Handbook	Dec	88	A257

FLUID POWER DRIVES

Hydrostatic drives improve quality and productivity	Apr	85	29
Hydraulic motors — High performance in a small package	May	85	M40
Electro-hydraulic servosystems	Apr	86	59
Selecting the best hydraulic fluid	Oct	86	27
Hydrostatic drive withstands harsh environment	Mar	87	98
Understanding positioning cylinders	May	87	39
Hydrostatic drive Qs & As	Sep	87	25
Fluid power—1989 Handbook	Dec	87	A293

GEARS AND GEAR DRIVES

Gearing — Past, present, and future	Mar	85	G15
Specifying worm gears	Mar	85	G23
The case of worn out gears	Mar	85	G36
Gearing manufacturers index	Mar	85	G76
Associations of the gearing industry	Mar	85	G79
Top quality large gears work better, cost more	May	85	95
Gearing for off-highway vehicles	Jul	85	27
PM Planning pays off in gear drive purchases	Sep	85	35
Powdered metal gears put new teeth in PT drives	Oct	85	27
Turning the table on geared bearings	Nov	85	27
Phase-shifting differentials	Nov	85	43
Gears and gear drives — 1986 Handbook	Dec	85	A325
Turning right angles the easy way	Jan	86	85
Getting peak performance from hi-speed gear drives	Feb	86	29
Plastic gears make sense now — more than ever	Feb	86	35
U.S. gears keep Soviet tanks rolling	Feb	86	41
Gearing up with basics	May	86	19
The root of gear noise — transmission error	May	86	27
ADI: Status of an emerging technology	Aug	86	25
Computer program speeds spur-gear design	Sep	86	35
Mechanical drive withstands harsh environment	Sep	86	42
Cycloidal drives: Q's and A's	Nov	86	23
Gears and gear drives — 1987 Handbook	Dec	86	A291
Profile of the U.S. gear industry	Mar	87	G7
New world-class gearmotors	Mar	87	G13
A method for improving gear life	Mar	87	G19
Best of Gearing Section: Best gearing			

Feature article title	Mon	Yr	Page

GEARS AND GEAR DRIVES cont.

articles from past issues	Mar	87	G33
Planetary gearing concentrates on power	May	87	27
Analyzing gear standards	Aug	87	27
Additives promote high life for spur gears	Sep	87	17
Gears and gear drives — 1988 Handbook	Dec	87	A323
Solving gear noise problems with single-flank inspection	Feb	88	63
Gear industry sees positive signs	Mar	88	23
More competitive products: aim of Gear Research Institute	Mar	88	29
Growing prospects for near-net-shape gears	Mar	88	32
Precision gear reducers: how and when	May	88	71
New materials lead to better products	Jul	88	36
Computer program aids worm-gear development	UF	88	62
Service factors help fine-tune gear selection	Sep	88	53
Gears and gear drives—1989 Handbook	Dec	88	A311

MOTORS

Motors — Past, present, and future	May	85	M7
Motor insulation systems	May	85	M21
Associations of the motor industry	May	85	M28
Linear motors for linear motion	May	85	M35
Hydraulic motors — High performance in a small package	May	85	M40
Matching motors to loads	May	85	M45
Motor manufacturers index	May	85	M50
New electronic device ends centrifugal switch problems	Aug	85	27
Single-phase motors are not created equal	Sep	85	19
Pancake motors solve slitter space constraints	Oct	85	77
Motors — 1986 Handbook	Dec	85	A383
Sizing brushless servomotors	Feb	86	45
The changing motor industry	Apr	86	35
Handling fragile parts faster: one step at a time	Apr	86	40
New super magnets are on the way	Apr	86	49
Motor rewinds and efficiency	Apr	86	55
Electro-hydraulic servosystems	Apr	86	59
Motorized pulleys convey savings	Jun	86	27
DC motor field protection	Jul	86	17
Selecting motors for hazardous environments	Oct	86	21
Motors — 1987 Handbook	Dec	86	A359
Linear motor makes transfer device fast and accurate	Jan	87	21
Permanent magnet motor markets expand	Mar	87	91
Modular motor line announced	Apr	87	35
The state of the motor industry	May	87	M7
Disc-rotor stepmotors perform	May	87	M15
Line voltage and ac motor performance	May	87	M23
Optimize your motor starter selection	Jun	87	17
Matching ac motors to adjustable-speed drives	Jul	87	25
Understanding the secrets of commutator appearance	Aug	87	33
Selecting the right servo	Oct	87	27
Windings give rotor position feedback in new BLDC motors	Nov	87	15
New CAD-optimized stepmotors	Nov	87	21
Motors — 1988 Handbook	Dec	87	A361
How to start something: bringing motors to speed	Mar	88	61
A turned-on technology: start-winding switches	May	88	23

Feature article title	Mon	Yr	Page

MOTORS cont.

Will superconductors remake the electric motor?	May	88	27
Diesel engine helps oil explorer make tracks, lightly	May	88	31
BLDC motor runs solar-powered racer	May	88	32
UL wants you—to help on hazardous-location motors	May	88	33
New devices to keep motor bearings clean	May	88	34
Series-wound motors: small, potent, popular	Jul	88	53
High-speed direct linear positioning with linear step motors	Aug	88	31
Motors for low-temperatur work	Sep	88	57
Partial motors: worth a look	Nov	88	41
Motors—1989 Handbook	Dec	88	A349

PT ACCESSORIES

Matched rings improve reliability	Feb	85	18
Improving mechanical hearts	Mar	85	123
Tolerance rings improve PT performance	Apr	85	33
Triple lip-seal bearings improve	Jul	85	B27
Convoluted boots protect critical PT components	Jul	85	92
PT accessories — 1986 Handbook	Dec	85	A429
Double-sealed reducers save money	Jan	86	92
Sizing shafts — the easy way	Feb	86	53
An update on radial lip seals	Apr	86	25
New bushings feature integral keys	Jul	86	21
Selecting the best hydraulic fluid	Oct	86	27
PT accessories update	Oct	86	41
Centralized lubrication often improves reliability	Oct	86	47
Linear actuators position solar collectors	Oct	86	52
PT accessories — 1987 Handbook	Dec	86	A393
Centralized lubrication often improves reliability	Jan	87	17
Helical isolators protect equipment from vibration	Apr	87	31
Bi-modulus seal enhances pumping action	Jun	87	13
Vibration monitoring: Industry's EKG	Jun	87	25
Microlog system adds accuracy to predictive maintenance program	Jun	87	32
Wear particle analysis indicates machinery condition	Jun	87	43
Better maintenance through thermography	Jun	87	48
Applying tensioners effectively	Aug	87	17
NASA develops high-temperature lubricant	Oct	87	41
Tests prove Waveseal runs cooler	Oct	87	41
PT accessories — 1988 Handbook	Dec	87	A393
Tips on selecting and applying linear actuators	Mar	88	39
Now in place: national shaft design standard	Mar	88	55
Seals for motor bearings	May	88	34
Putting the damper on torsional vibration	May	88	41
New materials lead to better products	Jul	88	36
High-temperature liubricant research promoted to new class	Jul	88	38
Composite shafts at work	Jul	88	40
Shaft-alignment systems up productivity	Jul	88	41
PT owner's guide to ballscrew			
Linear-motion advances: pathways to glory	Aug	88	15
refurbishing	Aug	88	39
How to analyze shaft and bolt failures, Part I	Aug	88	59
How to analyze shaft and bolt failures, Part II	Sep	88	43

Feature article title	Mon	Yr	Page
PT ACCESSORIES cont.			
What's new in central lubrication?	Oct	88	41
Selecting your bearing retainer system	Oct	88	47

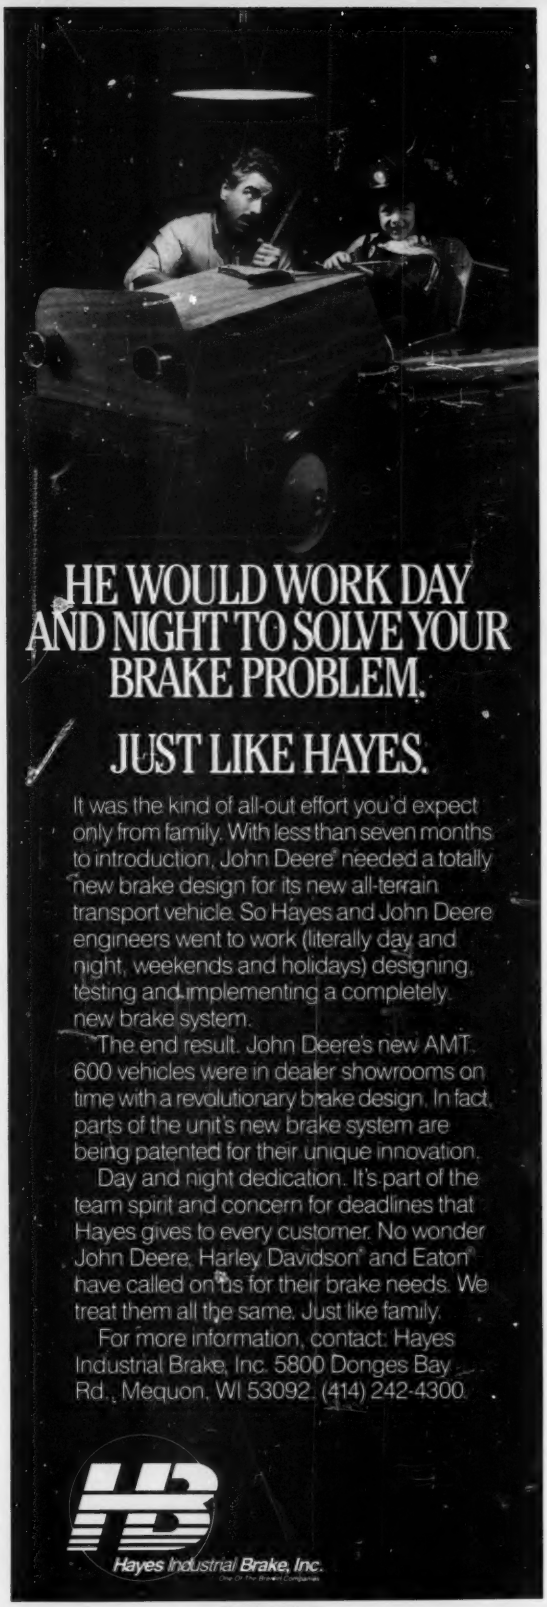
Fluid power—1989 Handbook	Dec	88	A285



HE WOULD WORK DAY AND NIGHT TO SOLVE YOUR BRAKE PROBLEM.
JUST LIKE HAYES.
It was the kind of all-out effort you'd expect only from family. With less than seven months to introduction, John Deere® needed a totally new brake design for its new all-terrain transport vehicle. So Hayes and John Deere engineers went to work (literally day and night, weekends and holidays) designing, testing and implementing a completely new brake system.
The end result. John Deere's new AMT 600 vehicles were in dealer showrooms on time with a revolutionary brake design. In fact, parts of the unit's new brake system are being patented for their unique innovation.
Day and night dedication. It's part of the team spirit and concern for deadlines that Hayes gives to every customer. No wonder John Deere, Harley Davidson® and Eaton® have called on us for their brake needs. We treat them all the same. Just like family.
For more information, contact: Hayes Industrial Brake, Inc. 5800 Donges Bay Rd., Mequon, WI 53092. (414) 242-4300.
